Summary

Software Development graduate with professional IT experience and hands-on experience building and shipping complete applications and games in C#. Developed and published three independent Unity titles on Steam, covering architecture, documentation, implementation, debugging, UI and release. Seeking a junior C#/.NET or software development role where I can continue developing production-quality software in a professional team.

Education

Unicorn University

Bachelor's degree (Bc.)

Software Engineering

Prague, Czech Republic • 2023–2026

Relevant coursework: Software Engineering, Software Architecture, Web Development, Databases, Algorithms and Data Structures, Cloud Application Architecture, UI/UX Design.

Experience

ADP

Prague, Czech Republic

Junior Application Tool Specialist

March 2021 - January 2022

- Developed and maintained internal web applications using **JavaScript, AngularJS, Node.js, MySQL and REST APIs**.
- Built data-processing functionality for filtering, transforming, storing and displaying employee sales and performance data.
- Developed and deployed internal tools used by approximately 40–60 managers and processing data from hundreds of employees.

Imagine VR LAB s.r.o.

Prague, Czech Republic

3D Artist

March 2024 - September 2024

- Designed, created and optimized 3D environment assets, props and LODs for an indie VR game using Blender and Photoshop.
- Tested assets and scene layouts in-engine and iterated based on visual and performance requirements.

Independent Game Developer

Prague, Czech Republic

Self-employed

September 2022 - Present

- Developed and published three commercial games using Unity and C#.
- Designed modular systems for gameplay logic, progression, state management, persistence and UI.
- Implemented serialization, data handling, scene management and asynchronous/coroutine-based workflows.
- Debugged, tested and maintained production code through release and post-launch updates.
- Managed projects from initial architecture and prototyping through deployment on Steam.

Projects

Clicksmith

- Built modular C# systems for item generation, progression, state handling and persistent data.
- Added JSON serialization, data-driven gameplay logic and post-release content while maintaining existing player saves.

<https://store.steampowered.com/app/4420910/Clicksmith/>

WreckingBall

- Developed C# gameplay systems for physics-driven interactions, modular abilities and room progression.
- Structured game-state and object-lifecycle systems around reusable gameplay components.
- Created technical, design and project-management documentation covering architecture, scope, risks, milestones and implementation planning.

<https://store.steampowered.com/app/4860390/WreckingBall/>

Cosmo's Industry

- Developed interconnected C# systems for resource management, crafting, progression and shop simulation.
- Connected inventory, UI and gameplay state across multiple interacting systems.
